

Field Gauge Description & Instructions

Field Gauge - is a convenient performance tester for **Smart Fieldmeter**® instruments. It allows user to get the instantaneous verification of the instrument, including the probe, meter and meter-probe cable.

Operation verification takes only a few seconds and eliminates most of the uncertainty related to instrument setup. Operation of the **Field Gauge** is extremely simple: Place the probe (connected to the working meter) inside the **Field Gauge** opening and push slightly the end button switch. Green LED will turn on, indicating that test field has been created. Read the meter (range 20 V/m unless other range is specified). The displayed meter reading should be within the limits specified for each probe model.

Field Gauge is compatible with all **Smart Fieldmeter**® broadband probes. This includes all **PI-01**, **PI-02** and **PI-03** broadband probes.

Disclaimer Note:

Field Gauge™ is not intended to be used as a precision calibration source. It verifies the instrument performance but it can't be a substitute for test laboratory calibration using the NTS(UK NPL) traceable setups.
